CONTRAST-ENHANCED SPECTRAL MAMMOGRAPHY

When a mammogram and ultrasound are inconclusive, SenoBright offers a straightforward, cost-effective problem-solving alternative to MRI that delivers faster, confident diagnosis for a better patient experience.

**Increase diagnosis confidence**
- **HIGH SPECIFICITY**: for breast cancer diagnosis
- **HIGH SENSITIVITY**: to reduce false-positives and help prevent unnecessary biopsies and surgeries

**Improve patient experience**
- **LESS WAITING**: Perform the quick exam at the same time, same location, with the same equipment
- **REDUCED ANXIETY**: Release your patient immediately in the case of a negative exam

**Reduce Costs**
- **LESS EXPENSIVE...** than breast MRI, with similar clinical performances and better specificity
- **FEWER FALSE POSITIVES...** high specificity means fewer unnecessary biopsies and surgeries
- **ENHANCED MRI AVAILABILITY...** frees up MRI time for other exams

**How It Works**

1. INSTALL
2. INJECT
3. ACQUIRE
4. REVIEW

**Contrast agent** highlights areas of unusual blood flow

**Simple steps in your clinical routine**
- 1. INSTALL
- 2. INJECT
- 3. ACQUIRE
- 4. REVIEW

**STANDARD INTRAVENOUS IODINE INJECTION** performed in your radiology department

**ACQUISITION OF USUAL 4 MAMMOGRAPHIC VIEWS** on the same mammography system
